

ABSTRACT OF THE DISCLOSURE

0017 The **oGo** is a self-contained plastic device that can be added under the seat of any toilet. It does not significantly change the appearance of the toilet.

0018 The **oGo** removes unwanted odors from the toilet by drawing them through the main housing and into the activated charcoal filters that have been treated with oxygen to open millions of tiny pores between the carbon atoms. These pores attract and absorb the unwanted bathroom odors.

0019 The small component parts are designed to run quietly and effectively. The actual life of each component part will depend on the extent of the use of each individual device. There are two lithium batteries that power two small motors that operate two fans. The device is activated by two infrared motion detectors.
